THE MATERIALS

Which material is which.

Every page in this catalogue is labeled at the top with its material, so you always know what you are looking at.

	Aluminum MODERN COLLECTION	Steel CLASSIC COLLECTION
LOOK	Clean lines, slats and privacy screens	Ornamental scrolls, crests and forged detail
RUST	Can never rust	Galvanized in zinc against rust
WEIGHT	Light, easy on gate openers	Heavy, solid and grand
FINISH	Powder coat in any RAL color, or wood grain	Hand sprayed in many layers, with gilded or bronze accents
BEST FOR	Modern homes, coastal areas, pools	Classic estates and grand entrances

01 THE MODERN COLLECTION · ALUMINUM

Modern aluminum.

Clean modern lines, built to order and installed by our own crew. Design your own with the Linear Series, then see real projects we've completed across Los Angeles.

01 **Will never rust**

Aluminum naturally can't rust, so no galvanizing is needed. Ideal near the coast, sprinklers and pools.

02 **Light but strong**

Lighter than steel, so sliding and swing gates move smoothly and put less strain on hinges and automatic openers.

03 **Made to your design**

Slat width, spacing, height and privacy level are all set to your property, with gates, fences and screens that match.

04 **Powder coated finish**

A durable, baked on powder coat in any RAL color or a wood grain look. No repainting, no peeling.

LINEAR FENCE

Full privacy.

Slats sit tight together for a solid, private wall.

Wood grain.

Available on our aluminum gates and fences. A wood grain pattern is fused into the powder coat, so it has the warmth of real wood but never rots, warps or needs staining.

Walnut

Golden Teak

Rosewood

01 **Looks like real wood**

Natural grain and warm tones, on any aluminum gate, fence or screen.

02 **No upkeep**

No rot, no termites, no sanding or staining. Ever.

Powder coating.

Every DNA aluminum and modern steel gate and fence is finished with premium powder coat. A tough baked on finish, made to last outdoors.

Any RAL color

We match colors to the RAL Classic chart, the industry standard, with over 200 shades to choose from.

Premium powders

We use only top professional powder coating brands, made for outdoor UV and weather.

Oven baked

The powder is sprayed on, then oven cured at about 400°F until it fuses into one hard, even shell.

Why it lasts

Thicker and tougher than paint. Resists chips, scratches and sun fading.

Handcrafted steel.

Ornamental gates made the traditional way. Solid steel, shaped and welded by hand, then sealed against the elements. Each one is built to order for its opening.

01

Solid steel construction

Heavy gauge steel frames and pickets give the strength, weight and presence a grand entrance calls for.

02

Shaped by hand

Scrolls, leaves, crests and finials are heated, bent and forged one piece at a time, no two gates are exactly alike.

03

Galvanized against rust

The finished steel is coated in zinc, which shields it from moisture from the inside out.

04

Hand sprayed finish

Many thin layers are sprayed by hand over the zinc, reaching into every curve and scroll. The highest quality finish for forged work, with optional gilded or bronze accents.
