May 15, 2026

I am pleased to offer my recommendation of Voyager Marine Electronics following the completion of a significant refit of the Alarm Monitoring System (AMS) and integrated bridge systems aboard M/Y Beothuk.

From the initial planning stages through final commissioning, my experience with Voyager Marine Electronics was exceptionally positive. The project was approached with a high degree of professionalism, technical expertise, and attention to detail. The quality of the installation and finished work reflected the standards one would expect from a company experienced in complex yacht electronics and integrated systems.

I would particularly like to recognize Marie for her outstanding coordination and communication throughout the project. She maintained consistent communication, kept me well informed of the project's progress, budget and ensured that questions, requests, and outstanding items were addressed promptly. Her responsiveness and attention to detail gave me confidence that the project was being properly managed at every stage.

Having spent more than three decades in the yachting industry and having overseen numerous refits, upgrades, and technical projects, I have learned that the success of a refit depends on considerably more than technical ability alone. Communication, organization, accountability, and the willingness to see a project through properly are equally important. Voyager demonstrated these qualities throughout our project.

Based on my experience, I would have no hesitation in engaging Voyager Marine Electronics for future projects or recommending the company to yacht owners, captains, management companies, and industry professionals seeking a knowledgeable and dependable marine electronics partner.

Sincerely,

Captain Jerry Samuelson
