

RELEASE NOTES

ComplianceGo centralizes the entire stormwater compliance process, combining inspections, permits, documentation, weather data, and reporting into one intuitive platform to keep your entire team on the same page. Automation and real-time features like rain alerts and digital reporting save time, lower costs, and improve compliance.

NEW FEATURES

- Users can add custom site fields to show up on the site page, dashboard, and view-only. Access via "+ Manage Site Fields for Site Categories"
- Users can enable a feature that allows action items that are Closed but not Verified to count as "Due" or "Late" as if they were still open.

ENHANCEMENTS

- Weather triggers have been changed from a 6 hour schedule to an hourly schedule.
- The silence period for a weather alert notification on a site has been changed from a calendar day to 24 hours to support the new hourly schedule for weather triggers.
- Add support for "Landscape" mode on forms in the preferred format.
- Changed permit info display, added settings to control what info is displayed in forms.
- Added a form setting to hide a form's header.
- Removed the "Frequency" field from the header.
- Site map icons added from the legend will now remember the size of the last icon of that shape and color that was added to the map.
- Add more resilience to the site and permit data collected during an inspection.
- Changed MS4 division editors to work like MS4 users instead of Company Users.
- Forms created for MS4 divisions will now be available to both the company and MS4 side for sites under that division.
- Redesigned the map legend key to be more user friendly.
- Added a "Show Action Item Identifier/Title" option to form items with connected action items. If this is toggled off the "Attached Action Item" text and the corresponding action items will no longer show up under the question.
- Added Closing Notes to the "Notes" column in the action log report.
- Add the weather info and directions link to the pop up for site pins on dashboard map.
- Changed wording on pre-weather notifications.

BUG FIXES

- Fixed an issue that could cause column headers to not line up in tables.
- Fixed an issue that could cause an inspection to show as late after it was rescheduled.
- Fixed an issue that could cause the Image form element and the Text Area image element to overlap.
- Fixed an issue that could cause inspection reports weather history to pull future dates.
- Fixed an issue that could cause some site map icons not to add correctly.
- Fixed an issue on site maps that could cause a site map icon to stop displaying when it is moved.
- Fixed an issue that could cause a new site map icon to inherit the color of the last map icon that was placed.
- Fixed the "Show Closed Action Items" on site maps to correctly display closed action items.
- Fixed an issue that caused site map icons to be unavailable if the map was rotated.
- Fixed an issue that caused inspectors to see the "Edit Inspection" view of an inspection they had completed that they were just "Viewing".
- Changed the Line Tools on site maps to correctly display the thickness as users change it during the adding process.
- Corrected a tablet issue that caused the clock pickers to not display properly.
- Corrected an issue in the Inspector View that caused the action item cards to not display correctly on the site page.
- Corrected a site map issue that caused text boxes to not add correctly.
- Inspection Signature Dates and Times will now show local time instead of UTC.
- Updated the Microsoft and Google sign-ins to remove errors users were experiencing.
- During the site creation wizard, clicking on the map will correctly drop a pin again.
- Inspections can now be added during the site creation wizard again.
- Corrected an issue that could cause no icons to display on the map even when they were saved.
- Division level custom site fields will now correctly show for MS4 Inspect divisions.
- Target dates can now be changed through the inspections calendar again.
