Seamungus

Health tonic and planting food
for all plants including natives,
lawns and bare-rooted roses

Seamungus

Your plants will just love Seamungus... jam packed full of goodness, Seamungus is a soil and plant conditioner, manufactured by combining the very best composted raw materials – seaweed, fish, humic acid and manure. Now available in the original pellet form, a crumble form and most recently added to the range - a 1litre liquid concentrate. The Seamungus formula remains the same for all three.

Seamungus undergoes a unique composting process, specifically developed to stabilise the nutrients, maximise nutrient availability and to ensure the product is free of any parasites, pathogens and weed seeds. Most importantly, the resultant product retains the microbiology necessary for a 'living' product.

Whilst Seamungus contains a wide range of plant nutrients, it is perhaps the additional unique properties contained within seaweed that provide the catalyst for providing higher yields of sustained quality.

Seamungus will help your plants resist heat, drought and frost, along with pests and disease.

Seaweed contains a number of naturally occurring growth stimulants – fantastic for promoting plant and root growth and development. Seaweed is also recognised for its ability to retain moisture and increase the moisture level of the plant's cell sap – this increases the plant's ability to resist frost and heat stress.

Seamungus will help increase resistance to pests and disease, stimulate healthy growth both above and below ground, and most importantly, generally improve the wellbeing of your soil and plants.

100% Organic

Seamungus is registered with Australian Certified Organic (ACO). Whether growing organically or not, the rigorous ACO Certification process ensures a consistent high quality product. Due to its organic nature Seamungus is safe to use all year round, including winter.

Applications

Suitable for year round application as a health tonic and planting food for all plants including natives, lawns and bare-rooted roses.

Seamungus will hold up to 70% of its own weight in moisture – significantly increasing the soil's ability to retain water and nutrients.

Seamungus Crumble - Great for use in dry conditions and where more immediate breakdown is required. Ideal for lawns.

Application Rates (pellet or crumble)

Gardens:

Established – apply 100g per square metre every 6-8 weeks throughout the year, including winter, or as required.

Planting – apply 50g per plant to base of hole and cover with 1-5cm soil.

Pots – apply 50g per 8" pot (200ml) every 6 weeks with relative increases/decreases dependent on pot size.

Lawns:

Crumble is recommended

Established – apply 100g per square metre every 10-12 weeks throughout the year or as required.

New - incorporate 100g per square metre into the soil prior to planting or laying.

Always water in well

Handy Hint – A litre container will hold approximately 600g of Seamungus and 1 cup will hold approximately 150g.

Seamungus 1 litre Liquid concentrate Application rates

Shake well before use. 40mL (1 capful) of Seamungus diluted in 8-10 litres of water will treat up to 8 square metres of soil. For optimum results apply every month. Use diluted product within 1 week of dilution. 1 litre makes 250 litres.

Year round fertilising for year round health

Like humans and animals, plants require regular feeding throughout the year – at least once in each season.

Happy, healthy, well nourished plants are more resistant to pests, diseases, heat stress and frost.
