

Laundry

- At the start of everyday, take the full laundry bins from the utility room and start a load of laundry using the settings on the washer.

The bins from the PT's rooms should be brought to the utility room at the end of every day and swapped with an empty bin. If they aren't there, wait until no one is in their treatment room and swap baskets.

- Make sure the washer is on Cold and heavy duty (the settings shouldn't ever change though). Throw in one tide pod and let it run a full cycle.
 - When the washer is done, throw the laundry in the dryer and make sure it is on high temp and bulky items.
 - You can wash and dry all the laundry together.
- Once the laundry is folded, take it into the utility room to store. Make sure to check the treatment rooms if they need a refill on laundry and fill up their rooms before the utility room.
- Fold the sheets
