

Will AI Recommend Your Business?

Customers increasingly ask AI tools who to hire, what to compare, and which provider fits their needs. AI visibility is your ability to be found, understood, cited, described accurately, and recommended in those answers.

Visibility Is More Than a Mention

MENTION

Your business is named.

CITATION

A source about you is referenced.

RECOMMENDATION

You are suggested for a specific need.

ACCURACY

Your services and locations are described correctly.

REFERRAL

The answer sends a visitor to your site.

Six Foundations That Make a Business Easier for AI to Use

1 Accessible

Important pages can be crawled, indexed, linked, rendered, and read as text.

2 Clear

Your services, audience, service areas, process, limits, and business role are explicit.

3 Useful

Pages answer real buying questions with direct, self-contained sections.

4 Proven

Claims sit beside case evidence, authentic reviews, credentials, and original work.

5 Corroborated

Relevant directories, publications, partners, videos, and communities describe you accurately.

6 Measured

A repeatable prompt set tracks platforms, competitors, citations, accuracy, referrals, and inquiries.

A Practical Program: Audit, Improve, Monitor

AUDIT

Access, business facts, local signals, content, proof, and current AI answers.

IMPROVE

Fix gaps, strengthen decision pages, add evidence, and earn credible coverage.

MONITOR

Retest prompts across platforms; record competitors, citations, accuracy, and demand.

A Practical System for Stronger AI Visibility

Stronger AI visibility grows from accurate access, clear positioning, useful content, credible evidence, independent corroboration, and ongoing measurement working together as one connected system.

Start With an AI Visibility Audit

Find access, accuracy, content, evidence, local-signal, and citation gaps - then prioritize what to fix.
