// FREE GUIDE BY @AVIGRONDIN

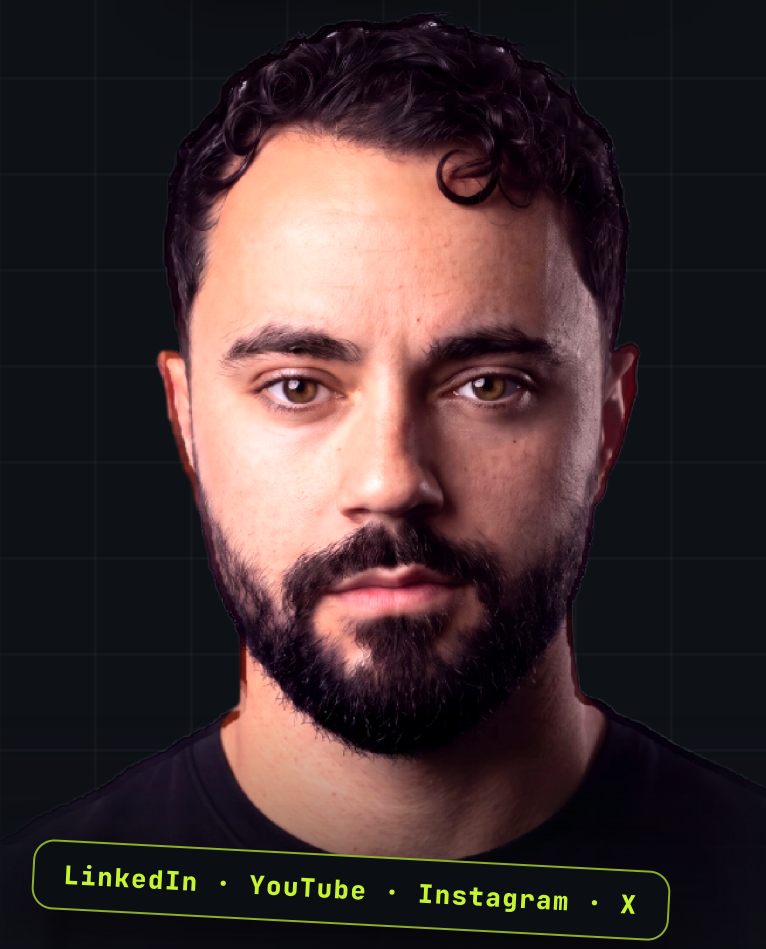

Agent Reach

SETUP GUIDE

agent-reach channels

Give your AI agent eyes on the entire internet. LinkedIn jobs, YouTube videos, Instagram, X and Reddit, from one line you paste.

FREE · OPEN SOURCE · MIT LICENCE

You commented AGENT. Here is the whole setup: the one line to paste, how to turn on each platform, the safety rules, and 19 prompts you can copy. Agent Reach is built by Panniantong and is free under the MIT licence. I did not build it.

// 02 · WHAT IT IS

Your AI can search the web. It can't get past the login.

Agent Reach is a free, open-source add-on for agents like Claude Code and Codex. Paste one line and your agent can read LinkedIn jobs, YouTube transcripts, Instagram, X and Reddit.

WHAT IT ADDS TO YOUR AGENT

01
Sites behind a login
An X account's posts, Reddit search, LinkedIn job details.

02
What's inside a video
YouTube subtitles, and speech-to-text when a video has none.

03
Clean, structured data
GitHub repos, issues and pull requests, already cleaned up.

04
Sites search misses
Chinese platforms like Bilibili, Xiaohongshu, V2EX and Xueqiu.

HOW A REQUEST WORKS

01 **You** ask in plain English. →

02 **Your agent** picks the channel and runs one command. →

03 **Agent Reach** fetches it with the right tool. →

04 **Your agent** gives you a table, summary or draft.

WHO IT'S FOR

Marketers
See what your niche posts and complains about.

Founders
Read Reddit and X for real pain points before you build.

Job hunters
Pull LinkedIn jobs into one table, matched to you.

Creators
Turn YouTube videos into notes, hooks and scripts.

READ-ONLY

It searches and reads. It never posts, comments, likes or sends messages, and it never logs in for you or asks for your password.

// 03 · WHAT YOU NEED

An AI agent that can run commands.

Agent Reach is a command-line tool. Your AI installs and runs it for you, so it has to be an AI that can run commands on your computer.

WORKS WITH

- **Claude Code,** Anthropic's agent. Sign in with your Claude account.
- **Codex,** OpenAI's agent. Sign in with your ChatGPT account.
- **OpenClaw and Hermes Agent,** two open-source agents the docs also name.

WON'T WORK

- **The regular chat** on claude.ai or chatgpt.com. It can't run commands on your computer.
- **Phone apps.** Same reason. Use a computer.

"CLAUDE OR CHATGPT?"

Both work, through their agents: **Claude Code** on the Claude side, **Codex** on the ChatGPT side. If your agent says it can't run commands, turn on command execution in its settings and ask again.

WHAT GETS INSTALLED

`uv`	A small installer for command-line programs. No admin password. Your agent installs it if missing.
`agent-reach`	The program itself, straight from the project's GitHub releases.
`its own browser`	For sites that need a login. Runs in the background, separate from your Chrome.
`~/.agent-reach/`	One folder holds every channel's tools, logins and settings.

WHAT IT COSTS

FREE
The tool
Open source, MIT licence. No subscription.

OPTIONAL
A Groq or OpenAI key
Only for YouTube speech-to-text on videos with no captions.

SYSTEM
Mac, Windows, Linux
The install doc covers all three.

// 04 · THE ONE-LINE INSTALL

Paste one line. Your agent does the rest.

Open your agent in a new chat and send it this, exactly as written. The same line installs it the first time and upgrades it later.

SEND THIS TO YOUR AGENT · INSTALL OR UPGRADE

```
Install Agent Reach:
https://raw.githubusercontent.com/Panniantong/Agent-Reach/main/docs/install.md
```

WHAT YOUR AGENT WILL ASK YOU

01	**Can I run commands?**	Say yes. If it says it can't, turn on command execution in its settings.
02	**Can I install uv?**	Say yes. It's a small installer and needs no admin password.
03	**Which extra channels?**	It tells you what works now (web, YouTube, GitHub, V2EX, Bilibili) and what you can add. Pick now or later.

WHAT IT RUNS FOR YOU

`uv tool install https://github.com/Panniantong/Agent-Reach/releases/latest/download/agent-reach.zip`
Installs the program from the project's own GitHub release.

`agent-reach setup`
Turns on the default channels and installs the Agent Reach skill for your agent.

Then it shows you an installation report, written by the program: what works now and what you can add.

CHECK IT WORKED

Ask your agent **"How is Agent Reach doing?"** It tells you which channels work right now.

"AGENT-REACH NOT FOUND"

Have your agent run `uv tool update-shell`, then open a new terminal or chat and try again.

// 05 · TURN ON YOUR CHANNELS

Turn on the platforms you actually want.

Five work right after install. Add the rest by saying it: **"Add LinkedIn"**.

CHANNEL	LEVEL	WHAT IT DOES	NEEDS
web	DEFAULT	Web search and page reading	Nothing
youtube	DEFAULT	Video info, search, subtitles, speech-to-text	Nothing. Key for speech-to-text
github	DEFAULT	Search repos, read issues and PRs	Nothing
linkedin	OPTIONAL	Search jobs, read job details	Login only for in-site search
reddit	OPTIONAL	Search, read comments, browse a subreddit	Login
twitter	EXPERIMENTAL	Search, profiles, an account's posts, threads	Login
instagram	EXPERIMENTAL	Search users, profiles, an account's posts	Login
facebook	EXPERIMENTAL	Search, profiles	Login

Also in there: Bilibili and V2EX (default), Xiaohongshu, Xueqiu, Boss Zhipin and Xiaoyuzhou (optional). **Default** works right away. **Optional** you add. **Experimental** works, but the platform fights automation harder and it can break any time.

SAY THIS TO YOUR AGENT

- "Add LinkedIn"
- "Add Reddit"
- "Add Instagram"
- "Add Twitter"
- "Remove V2EX"
- "Switch accounts"
- "Log out of Instagram"

HOW LOGINS WORK

- **Its own browser,** in the background, separate from your Chrome.
- **First time on a site,** it can copy that one site's login from Chrome. Never passwords.
- **Need to sign in?** `agent-reach login instagram` opens a window. You log in yourself.

USE A SECOND ACCOUNT

The login it reuses is usually your main account, and platforms may restrict accounts used for automation. The docs recommend a secondary account.

// 06 · USE CASE 1 · LINKEDIN

Scrape LinkedIn jobs into one clean table.

Say **"Add LinkedIn"** first. Public job listings work with no login; LinkedIn's own in-site search needs one. Then just ask.

1 · FIND THE JOBS · SEND THIS TO YOUR AGENT @avigrondin

```
Use Agent Reach to search LinkedIn jobs for "growth marketing manager" in Miami. Get 20 results and put them in a table: title, company, location, link.
```

2 · READ THE DESCRIPTIONS · SEND THIS TO YOUR AGENT @avigrondin

```
Read the full job description for the top 5 links. List the skills and tools that show up in more than one, and the salary if it's posted.
```

3 · MATCH YOUR RESUME · SEND THIS TO YOUR AGENT @avigrondin

```
Here is my resume: [paste it]. Compare it to those 5 jobs. Rank them by fit and tell me what to change in my resume for the top one.
```

WHAT IT CAN DO

- **Search jobs** by keywords, with an optional city or country.
- **Read one job** from its linkedin.com/jobs/view/ link.
- **Ask for a number.** It returns 5 results unless you ask for more.

MY TIP

- **Use it for leads too.** Search the roles your clients hire for and you get a list of companies hiring for them right now.
- **Jobs only.** It reads job posts, not people's profiles.

WHO DOES WHAT

01 **You** say "Add LinkedIn" once. →

02 **Your agent** runs the job search for you. →

03 **Your agent** reads each job post it found. →

04 **You** get a ranked shortlist to act on.

// 07 · USE CASE 2 · YOUTUBE

Analyze any YouTube video without watching it.

YouTube works right after install. Your agent can search videos, read a video's details and pull its full subtitles. No key needed for any of that.

1 · BREAK DOWN ONE VIDEO · SEND THIS TO YOUR AGENT @avigrondin

```
Use Agent Reach to get the full subtitles of this video: [link]. Give me the hook in the first 30 seconds, the 5 main points, and how it asks for the click.
```

2 · STUDY A TOPIC · SEND THIS TO YOUR AGENT @avigrondin

```
Use Agent Reach to search YouTube for "AI lead generation" and show me 10 videos with channel and date. Then pull the subtitles of the top 3 and tell me what they all say, and what none of them cover.
```

3 · TURN IT INTO CONTENT · SEND THIS TO YOUR AGENT @avigrondin

```
From those subtitles, write 10 short-form hooks in my voice and a 60-second reel script on the gap nobody covered.
```

WHAT IT CAN GET

- **Details:** title, channel, date and description.
- **Subtitles:** the video's own captions or auto captions.
- **No comments.** There's no comments action for YouTube yet.

NO CAPTIONS ON THE VIDEO?

- **Speech-to-text** turns the audio into text. It needs a Groq or OpenAI key and uses that key's quota.
- **Enter the key in your own terminal,** never in the chat:

```
agent-reach configure groq-key
```

MY TIP

Pull the subtitles of your own videos too. Ask your agent to put your hooks next to the ones from the videos you study, and say what's different.

// 08 · USE CASE 3 · INSTAGRAM

See what's working on Instagram right now.

Instagram is experimental and needs a login (use a second account). There's no "trending" tab: it finds accounts, reads profiles and pulls an account's recent posts. Point it at the accounts winning in your niche.

1 · FIND THE ACCOUNTS · SEND THIS TO YOUR AGENT @avigrondin

```
Use Agent Reach to search Instagram users for "real estate coach". Show me 10 accounts with their bio, and the follower count if the results include it.
```

2 · PULL THEIR LATEST POSTS · SEND THIS TO YOUR AGENT @avigrondin

```
Pull the 12 most recent posts from @account1, @account2 and @account3. Group the captions by topic and tell me which topics and hooks repeat.
```

3 · WRITE YOURS · SEND THIS TO YOUR AGENT @avigrondin

```
Based on what repeats, give me 5 post ideas for my account with a caption for each. Flag the ideas none of them have done yet.
```

GOOD TO KNOW

- **It reads captions, not pictures.** It doesn't claim to see the image or video.
- **Search finds users, not posts.** Name the accounts you want to study.
- **Only trust numbers it shows you.** Ask for likes or followers only if they're in the results.

SAME IDEA, OTHER PLATFORMS

- **X:** search posts, an account's recent posts, a thread with its replies.
- **Reddit:** search posts, a subreddit's latest posts, a post with its top comments.

MY TIP

Pick 3 to 5 accounts in your exact niche that are a little bigger than you. Their last 12 posts are your trend list. Run it again every week and ask what changed.

// 09 · 10 PROMPTS TO STEAL

Ten more things to ask your agent.

Start with **"Use Agent Reach"** so your agent uses it, not its own search.

01	REDDIT	Use Agent Reach to search Reddit for "my CRM is" and list the complaints people repeat most, with links.
02	REDDIT	Pull the 20 latest posts in r/smallbusiness and group them by the problem people are asking about.
03	REDDIT	Read this Reddit post and its top comments. What do most people agree on? [link]
04	X	Search X for posts about "Claude Code" and sum up what people like and what they complain about.
05	X	Pull the last 20 posts from @[competitor] and tell me the 3 topics they post about most.
06	X	Read this X thread with its replies and list the best questions people asked. [link]
07	YOUTUBE	Search YouTube for [your topic], take 5 videos, pull their subtitles and write me 10 reel hooks from them.
08	LINKEDIN	Search LinkedIn jobs for "SDR" in Austin, 25 results. List the companies hiring and flag any with more than one post.
09	GITHUB	Search GitHub for open-source lead scoring tools. Give me the top 5 and what each one does.
10	ANY PAGE	Read this page and turn it into a one-page brief with the 5 points that matter. [link]

MAKE THEM YOURS

Swap the words in quotes and brackets for your niche, city or competitor. Reddit and X need their channel added and a login first (page 5).

// 10 · TROUBLESHOOTING + SAFETY

When it breaks, say what you see.

Your agent tells you which platform failed, why, and what to do next. These fixes come from the project's own troubleshooting doc.

It says it can't run commands	Turn on command execution in its settings, or use Claude Code or Codex.
agent-reach: not found	Run `uv tool update-shell`, then open a new terminal.
It needs a login	`agent-reach login <channel>` opens a window. You log in yourself.
Rate limited	The platform is slowing you down. Wait it out. Don't switch accounts to keep going.
Platform blocked (a captcha)	Stop. Clear it on the real site yourself, then try again.
A channel broke	Say "Upgrade Agent Reach", then `agent-reach check <channel> --text`.
Port 9222 is taken	`agent-reach configure browser-port 9333` moves it to a free port.
What works right now?	Say "How is Agent Reach doing?" or run `agent-reach doctor --text`.

THE SAFETY RULES

- **Install only from GitHub.** The PyPI package named `agent-reach` is NOT this project. Use the line on page 4.
- **No coin, no token.** The project has none. Ignore any crypto that uses its name.
- **Use a second account** for any site that needs a login.
- **Keys go in your terminal,** never in the chat.
- **Respect each site's rules.** Many limit scraping. Read public info, go slow, skip personal data you don't need.
- **Experimental can break.** X, Instagram and Facebook may stop working any day.

// 11 · CREDITS

Built by Panniantong. Free under MIT.

I didn't build Agent Reach. It's an open-source project by Panniantong on GitHub, and anyone can use it for free under the MIT licence.

MAKER

Panniantong

Maintains it and adds platforms people ask for.

HOW THIS GUIDE WAS MADE

Every step, command and channel in this guide comes from the project's own docs (the README, install.md, troubleshooting.md and its agent skill), read on Nov 3, 2026. I did not run the install for this guide. The project moves fast: if your agent's installation report says something different, follow the report.

MANAGE IT LATER

- **"Upgrade Agent Reach"** updates the program and every channel in one go.
- **"Uninstall Agent Reach"** lists what it would remove first, then removes it once you confirm.
- **"Let my other AI use it too"** gives that AI its own copy of the instructions.

BUILT ON

OpenCLI · yt-dlp · Jina Reader · Exa · bili-cli · boss-agent-cli

Agent Reach puts these open-source tools behind one command and keeps a backup tool for each job.

// 13 · WHAT NEXT

Your agent can see the internet. I build businesses with AI.

I use AI to build and run lead generation businesses. If you want to do the same, there are two ways to work with me.

OPTION 1 · THE COMMUNITY

Join my Skool community

Pay Per Lead Academy

Stop chasing clients. Start building a lead generation business.

- Pick a niche
- Run Meta and Google ads
- Find lead buyers and price your leads
- Automate delivery and tracking

Join on Skool →

skool.com/pay-per-lead-academy-3593

OPTION 2 · DIRECT

Book a call with me

1 on 1 with Avi Grondin · 60 minutes

One hour. Your business. My full attention.

- A deep dive into your specific business
- Your niche, your ads, your lead buyers
- A straight read on your numbers
- Your next best moves
