

Minimize Accidents and Maximize Safety

A portable safety solution designed to stabilize stone slabs during loading and unloading on pick-up trucks, utility trailers, and non-engineered slab A-frames.

Developed by an Engineer with 30+ years of experience solving industry problems!

Why it Matters

Loading and unloading stone slabs on standard or unsafe A-frames presents a high risk of slab tipping and injury. The Overhead RockLock™ Mechanism provides temporary yet highly effective slab restraint during active handling, significantly improving operator safety without permanent modification to existing equipment.

How it Works

Based on the proven RockLock™ safety concept, this freestanding aluminum mechanism is positioned over a standard A-frame to secure slabs on both sides simultaneously during loading or unloading. The system is removed only seconds before a slab is placed or removed, maintaining protection throughout nearly the entire handling process.

Key Benefits

- Reduces slab tipping and shifting during active handling
 - Improves safety when using non-engineered or temporary A-frames
 - No permanent installation or truck modification required
 - Fast setup and adjustment in the field
 - • Lightweight, corrosion-resistant aluminum construction
-

Ideal Applications

- Pick-up truck slab transport and delivery
 - Utility trailers
 - Stone yards and warehouses
 - Fabricators and dealers handling smaller slab quantities
-

Designed for Safety

The Overhead Slab RockLock™ Mechanism is engineered for professionals who prioritize safety when handling stone slabs without permanent A-frame systems. It delivers proven Rock-Lock™ protection where traditional restraints fall short.

Technical Specifications

Specification	Detail
Maximum Capacity	6 slabs per A-frame rack (3 per side)
Installation	No permanent installation required — compatible with most freestanding A-frames in pick-up truck beds
Material	Heavy-duty aluminum
Finish	Corrosion-resistant brushed aluminum
Unit Weight	15 lbs
Typical Use	One unit per A-frame or truck rack securing both sides

Order Now

The safest, strongest, and first-ever strapless slab-transport A-frame for trucks.
