

Operations and systems consulting for organizations that cannot afford for things to break.

## COMPANY SNAPSHOT

### LEGAL ENTITY

**Wolfmother Consulting Inc.**

### INCORPORATION

**Federally incorporated in Canada, 2023**

### OPERATING SINCE

**2018**

### LOCATION

**Vancouver, British Columbia**

### JURISDICTIONS SERVED

**Canada and United States**

### PRIMARY NAICS

**541514 · 611430 · 541611 · 541690**

### NAICS DETAIL

**541514** Computer systems design and related services

**611430** Professional and management development training

**541611** Administrative and general management consulting

**541690** Other scientific and technical consulting

## 01 CORE COMPETENCIES

- **AI and automation.** Autonomous systems with tool access, persistent memory and write access into live business systems. Custom application development. Workflow and process automation. Software stack audits and platform implementation.
- **Workforce training.** Multi-year competency-based programs combining digital, classroom and supervised practical delivery, including purpose-built physical practice environments. Competency frameworks, practical assessment, SOPs and knowledge capture.
- **Field data capture and reporting.** Mobile capture validated and routed into systems of record. Compliance records, inspection and audit reporting, hours into payroll and job costing, brand-aligned automated report generation.
- **Operations architecture.** Operational audits, process design and documentation, org and management structure, role definition, handoff and escalation design, capability transfer.
- **Safety and compliance.** Safety manuals and OHS documentation, compliance training, evidence capture and automation, audit and inspection preparation, safety management systems.
- **Human performance.** Program design for teams operating under pressure, grounded in measurement. Fatigue risk and shift-work systems, readiness and resilience programs, research translation.

## 02 DIFFERENTIATORS

- **We have produced work that was read by regulators and scored by evaluators.** Most operations consultants have not.
- **We have worked both sides of the procurement table.** Statements of Objectives, Statements of Work, proposal responses and deliverable presentations put in front of government evaluators. We know what a scoping document is trying to control for and how a response gets scored.
- **We build the whole compliance chain.** The manual, the training that proves people were taught it, the forms that capture the evidence, and the reports that prove it on demand. Most vendors sell one of those four.
- **Multi-jurisdiction by default.** Built across several regulatory regimes on both sides of the border, so the system travels instead of being rebuilt.
- **The engagement ends when your team owns it.** We find the root cause, build the system that resolves it, and train your people to run it without us.

## 03 PAST PERFORMANCE

- **Defense and human performance.** Wolfmother provides the operations and systems architecture for OPTML, a US defense human performance firm. Under that contract we have contributed to programs delivered across the US Air Force and Space Force, including the 2nd Air Force redesign of Basic Military Training, a multi-year human performance program at the USAF Weapons School, capability built for the 25th Air Support Operations Squadron, and expansion across Space Force training pipelines and Air Force technical schools.
- **Government contracting operations.** Built the internal operating systems for a government contracting firm: the process, documentation and reporting infrastructure that has to keep working when requirements shift.
- **Regulated industry.** Safety documentation and programs that have gone into provincial regulatory submissions, and safety programs written to OSHA standard for US operations, with the compliance capture systems underneath them. Plant, site and facility audit systems for manufacturing and heavy industry.
- **Workforce training.** Multi-year competency-based training programs combining online, classroom and supervised practical delivery, including purpose-built physical training environments. Still in operation at the companies we built them for.

## 04 DELIVERY MODEL

Wolfmother operates as a prime contractor with a vetted bench of specialist subcontractors: instructors, trades and construction firms, technical specialists and subject-matter experts, engaged per contract against the requirement. The team assigned to a contract is selected for the requirement rather than whoever happens to be on staff, and capacity scales to the scope of work rather than being capped by headcount. We manage the contract, the standards and the delivery. The client deals with one firm.
