

## Welcome to Our Dental Practice

We are delighted to welcome you to our practice.

At this time, due to limited provider availability, **we are not accepting new patients for ongoing treatment directly with Dr. Esmaili.** However, we are pleased to offer new patients the opportunity to undergo **Dr. Esmaili's comprehensive diagnostic assessment.**

This assessment is designed to look beyond the teeth and mouth alone. With advanced training beyond traditional dentistry, Dr. Esmaili evaluates the relationship between oral health, nervous system regulation, skeletal alignment, breathing, balance, and cranial function to develop a comprehensive understanding of each patient's individual needs.

Following the diagnostic assessment, our team will compile and organize the findings into a **comprehensive diagnostic presentation.** This presentation brings together the information collected during your evaluation—including clinical findings, imaging, scans, photographs, functional assessments, and other diagnostic records—to provide a complete picture of your individual needs.

You will then have the opportunity to **choose one of three providers who have been specifically trained by Dr. Esmaili.** These providers practice using the principles and clinical approach developed through their training with Dr. Esmaili and continue to consult with her regarding patients when appropriate.

Your completed diagnostic presentation can be provided directly to the provider you choose. **That provider will review the presentation and findings with you, answer questions, and use the information to develop your treatment plan and begin your care.**

Our goal is to give you and your chosen provider a comprehensive diagnostic foundation from the beginning, allowing your treating provider to understand the full picture rather than starting the evaluation process over again.

## **Your Initial Diagnostic Assessment**

Your appointment is designed to provide a comprehensive understanding of both your oral health and your broader health goals.

Please note that, due to the specific data requirements necessary for accurate diagnostic analysis and treatment planning, **all components of the initial assessment must be completed in our office.** We are unable to substitute outside scans, imaging, or prior assessments for our diagnostic protocol.

During this visit, we will gather information that may include:

- Postural analysis with photographic documentation to assess alignment and posture
- Extraoral and intraoral photography
- End-tidal CO<sub>2</sub> assessment to evaluate breathing efficiency
- Autonomic nervous system testing to assess stress and recovery regulation
- Vestibular system evaluation to assess balance and inner-ear function
- Bilateral weight distribution analysis to evaluate weight balance between both sides of the body
- Digital Trios scan for a 3D digital assessment of the teeth and bite
- CBCT imaging for 3D evaluation of bone structure and airway
- QEEG/WAVi assessment, when indicated, to provide additional information regarding brainwave activity and nervous-system function

The comprehensive diagnostic assessment is **\$2000 with \$500 deposit due at time of scheduling.**

### **What Happens After Your Assessment?**

Once all of your diagnostic information has been collected, **our team will organize the findings into a comprehensive PowerPoint presentation.** This presentation is designed to bring all of the information together in one place so that your chosen treating provider can clearly understand your individual findings and recommendations.

You will then select one of our **three providers trained by Dr. Esmaili** to continue your care. We will send your completed diagnostic presentation and applicable records to that provider.

Your treating provider will review the presentation with you, discuss the findings and recommendations, answer your questions, and use this information to guide your treatment.

**After your initial diagnostic assessment and the completion of your records, you will not have additional routine appointments at our office.** Your ongoing treatment will take place with the provider you select.

There may, however, be circumstances in which your treating provider refers you back to our office for additional analysis. This may include a **mid-treatment analysis** to evaluate changes and progress during care or a **final analysis** to reassess your findings at the completion of treatment.

This approach allows us to provide the comprehensive diagnostic assessment and framework developed by Dr. Esmaili while allowing our trained provider partners to provide your ongoing treatment and care.

Our goal is to create a seamless connection between your initial diagnostic evaluation and your treating provider, ensuring that the information gathered during your assessment continues to inform your care throughout your health journey.
