

Livestock Emergency Response Plan: Information Package

Hello,

The online LERP is a deep dive into how to prepare for a Livestock Emergency Response. It has been developed by experts in handling livestock at North Dakota State University, West Virginia University, Ohio State University, Iowa State University and the North Dakota Department of Agriculture specifically to train firefighters, law enforcement officers, EMS personnel, veterinarians and other interested personnel. We offer a Livestock Emergency Plan course, delivered online through multiple self-paced modules.

Please watch the introductory video below.

Introductory Video:

The contributors to the development of LERP included: Lisa Pederson, NDSU Central Grasslands Research Extension Center; Penny Nester, NDSU Extension Bowman County; Kirsten Rall, NDSU Extension Dunn County; Jerry Yates, West Virginia University Reymann Memorial Farm; David Workman, West Virginia University Extension Service; Steve Boyles, PhD, Ohio State University Department of Animal Science Department of Animal Sciences; Jan Shearer, MS, DVM, Iowa State University Veterinary School; and Nathan Boehm, North Dakota Department of Agriculture/North Dakota Board of Animal Health

LERP Training: Livestock Emergency Response Plan

Agri Learn Institute
223 Bald Hill Church Road
Dilliner, PA 15327

Course Goal

This training will provide agricultural and traditional first responders with an introduction, some performance skills, and understanding relative to some of the unique situations for emergency responders that motor vehicle incidents involving bovines and other livestock can present. The knowledge and skills gained will assist in the effective preparation and response to this type of emergency and the unique situations that are presented.

Learning objectives

1. Recognize some of the unique features of incidents where bovine, large animals, or other livestock are involved.
2. Recognize hazards associated with incidents involving bovines and other large animals.
3. Understand biosecurity issues associated with livestock (zoonotic disease, Foreign Animal Disease (FAD), etc.).
4. Demonstrate understanding of animal behavior, animal care and welfare, and animal handling techniques for bovines and other large animals.
5. Describe the various methods of proper animal restraint and humane euthanasia that may be used in emergencies involving bovines or other large animals.
6. Develop skills in creating containment strategies using existing structures, gates, panels, etc. to restrict movement of cattle for triage, controlling loose animals, etc.
7. Introduction to extrication of live animals/mortality from damaged transporters.
8. Describe proper handling of mortality at the scene and after.
9. Enhance understanding of descriptive terms relative to bovines.
10. Understand the importance of debriefing following an incident involving bovines or other animals.
