## THE 3-DAY INTENSIVE FULL-ARCH PRECISION PROTOCOL

Atlanta, GA | April 9–11, 2026

## PROGRAM ABSTRACT

**Surgical–Prosthetic Synchrony: Foundation + Full Clinical Workflow to Enhance Patient-Specific Full-Arch Rehabilitation** is a three-day, clinically driven program designed to improve predictability, efficiency, and long-term outcomes in full-arch implant therapy by unifying surgical execution with prosthetic intent from the first appointment to final delivery.

Participants will learn contemporary implant-system developments (design, surface, indications), patient selection and risk stratification, and practical decision trees that reduce complications and common failure points. The course emphasizes a repeatable workflow that integrates digital planning with hands-on surgical and restorative protocols—anatomically guided and digitally guided implant placement, healing components, scan body strategies, multi-unit abutment sequencing, and the role of one-piece implants in full-arch solutions.

Through live surgery, case deep dives, panel discussion, and dedicated lab/restorative focus, attendees will refine techniques to achieve accuracy, passivity, and biologically respectful emergence profiles while improving jaw relationship records and biofunctional occlusal design. The program also addresses the often-overlooked operational side of full-arch care—time, staffing, instrumentation, imaging, fixture and lab costs, complication expense, and marketing—so clinicians can build a sustainable full-arch model supported by excellent patient communication and a disciplined patient journey.

A dedicated PRF/regenerative track provides science-based protocols and advanced applications with hands-on training (membranes, plugs, sticky bone, extraction/bone grafting support, and facial esthetic adjuncts).
