

Is Your Dog's Gut Setting the Stage for Cancer? What You Can Do Right Now to Build a Cancer-Resistant Terrain

One in four dogs will develop cancer in their lifetime. That number is not random – and neither is what you can do about it. Science now confirms what functional veterinarians have known for years: the gut is where cancer prevention begins. Here is where to start.

5 Actions to Start Building a Cancer-Resistant Terrain

1

Transition to fresh, whole food

Processed, carbohydrate-heavy kibble feeds cancer. Real food starves it. Start somewhere – even partial fresh food matters.

2

Question every pharmaceutical intervention

Antibiotics, unnecessary medications, and isoxazoline flea and tick products all hit the microbiome. Ask whether it is truly necessary every single time. No get-out-of-jail-free drugs.

3

Revisit your vaccination approach

Ask about titer testing before automatic boosters. Over-vaccination has a cost. Individualize – do not automate.

4

Get your dog's gut assessed – not guessed

A VDI microbiome panel gives you real data – not a generic probiotic recommendation. Real data leads to real solutions.

5

Support the upper GI first

Microbiome support only works on a functioning foundation. Chronic digestive issues are a signal the upper gut needs attention first. Talk to a functional veterinarian.

A Note on Generational Health:

Where the puppies begin is where the parents were at conception. Each generation can inherit a more compromised terrain than the last. That is not a reason for despair – it is a reason to start now, wherever you are, and build forward. Every generation can be healthier than the last. It starts with the gut. And it starts today

Book a personalized consultation with Dr. Pam

Rooted in science, experience, intuition, and love – this is where guesswork ends and confidence begins. Walk away with a clear plan, a deeper understanding of your dog's needs, and the peace of knowing you're doing everything you can to give your dog the healthiest, happiest life possible.
