Tampa Bay since 2007

Sample Detach & Reinstall Photo Report

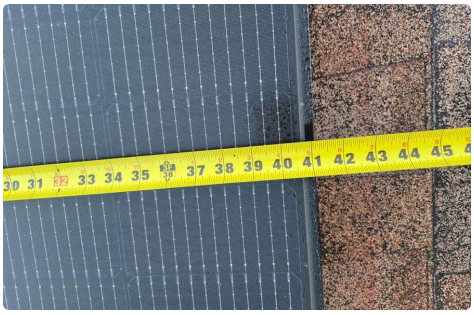

From a recent residential shingle reroof in Tampa Bay. Customer details removed. The full job report has **125 time-stamped photos across three visits:** removal on day 1, new attachments after the new roof on day 15, and reinstall on day 16. Every job we do is documented this way, and the report is yours to keep.

1 Before anything comes off: the system is documented

We photograph the array, the electrical equipment and the meter, and tape-measure the full array layout and setbacks. Any pre-existing problem is on record before your crew touches the roof.

Array photographed in place

Panel layout measured

Electrical equipment documented

2 Removal: the roof stays sealed for your tear-off

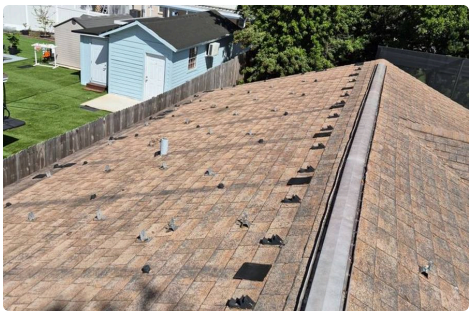

Panels and rails come off and are stored on site. The old attachments stay in place, so the roof is not left with open holes between our visit and yours. Your crew pulls them with the old shingles.

Panels and rails removed

Old attachments left in place

Roof sealed until tear-off

3 New roof: all-new flashed attachments

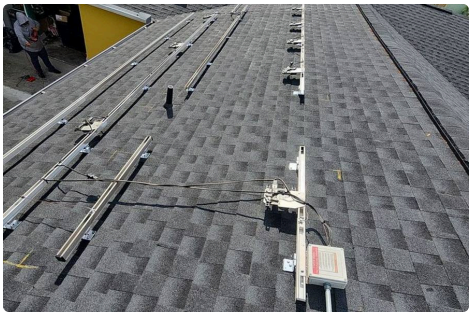

After your roof passes inspection, we install brand-new flashed attachments under our permit. Existing rails are reused unless they are too old to meet code. Every attachment carries our 25-year no-leak guarantee.

New flashed attachments

Rails set and aligned

Wiring secured along the rails

4 Reinstall and confirm

Panels go back in their original layout, wiring is secured, and the system is checked at the electrical equipment before we leave.

Array reinstalled

Original layout restored

Electrical checked at completion

Solar on your next reroof? Call or text Duane Wright at (813) 285-4505, or book 20 minutes at tamparoofingandsolar.com. Call before noon and you'll hear back the same day.
