Reliable Engineering. Global Reach.

We are a technical team serving clients local and international. We combine engineering expertise with practical construction experience to deliver systems that are not just effective, but sustainable and built to last.

While our roots are in water treatment, we have expanded our capabilities to provide comprehensive support in mechanical, electrical, structural, and architectural works.

We don't strive to be the biggest; we strive to be the most reliable. Our goal is simple: to provide high-quality, cost-effective solutions that help our clients and partners build with confidence.

Our Products

Bio-Lite Compact STP™ is ideal for residential and commercial use especially in tight or limited spaces. With its built-in STP + oil-and-water separator, it's perfect for high-grease establishments.

Bio-Lite™ helps separate fats, oil and grease properly, reducing hauling volume and cost, while still ensuring compliant effluent quality.

Space-saving. Plug-and-play. Easy to install. Fast. Affordable. Effective.

Our Products

BIO-SELECT™ offers a groundbreaking solution for wastewater treatment plants for industrial, particularly those facing space constraints or operating underground. As a modular EBPR retrofit platform, it enables stable phosphorus and nitrogen removal without the need for major civil reconstruction. By prioritizing biological stabilization over chemical dependency, **BIO-SELECT™** ensures consistent compliance with nutrient regulations while reducing operational costs. Facilities benefit from significantly improved sludge settleability, reduced chemical consumption, and lower sludge disposal expenses. Furthermore, its installation outside the existing treatment plant footprint makes it ideal for retrofitting space-limited or underground sites, delivering reliable performance within just 7 to 15 days under optimal conditions.

Our Products

AquaDesal™ (RO Recovery System) is crucial for addressing global water scarcity, but traditional systems achieve only 35-45% recovery, wasting significant water as brine. Technology revolutionizes AquaDesal™ by increasing recovery up to 60%, using multi-stage RO, interstage boosting, and energy recovery devices (ERDs) to enhance efficiency. This innovation reduces brine discharge, lowers energy costs, and minimizes environmental impact, making desalination more sustainable and cost-effective for the future.

Our Products

FeroX™ is an advanced iron oxidation system that removes dissolved ferrous iron from groundwater using a pressurized aeration process. By injecting finely diffused air into a moving water stream, it ensures complete oxidation without chemical additives, making filtration more efficient. Its compact, cost-effective design integrates seamlessly with pressure filtration systems, providing a reliable and eco-friendly solution for iron removal.
