

## **Florida Section of the AIChE 2026 Convention Twenty-Eighth Annual Sulfuric Acid Workshop**

Sulfuric acid producers contract with a plant designer for a new acid plant, to replace aging capital equipment or to implement a process improvement. What happens to your purchase order once the manufacturer receives it?

This year's Sulfuric Acid Workshop will focus on what happens after you issue a PO, with a detailed look at 'How sulfuric acid equipment gets made'. Key industry suppliers will walk us through how these items are built and delivered.

Main air blowers

Catalyst

Acid coolers

Waste Heat Boilers

Fabricated equipment like towers, tanks, converters, etc

The goal is to make operators more aware of manufacturing steps that you may want to watch more closely in the future.

Engineers involved in plant operations must fully understand a variety of issues to run a sulfuric acid plant efficiently. The Workshop's objective is to assist engineers in evaluating the operation and maintenance of their plants.

Following each presentation, there will be a brief question-and-answer session.
