RCT Industrial - A First-Aid Program Your Safety Team Trusts and Your CFO Can Measure

A protocol-governed, on-site recovery device engineered to reduce recordable injuries, compress workers' comp cost, and protect your workforce — without slowing production or straining budget.

OSHA First Aid | **Fewer Claims** | **Lower WC Cost** | **Zero downtime**

THE HIDDEN COST ON YOUR FLOOR

Musculoskeletal strain is the single largest, most predictable driver of injury cost in your facility, and it's now a controllable variable.

Every industrial facility carries this exposure today. RCT Industrial gives your safety team a documented, protocol-governed first-aid program — and gives finance a measurable lever on workers' compensation cost, without adding headcount or infrastructure.

#1
MSDs are the most common workplace injury in America

937,620
MSD DART cases (BLS/NSC, 2023–24)

$181.4B
total annual cost of work injuries to the U.S. economy (NSC, 2024)

4–5x
indirect-cost multiplier on every direct MSD claim
Overtime, retraining, lost output

WHAT IS RCT INDUSTRIAL?

Class I FDA-Cleared

Registered medical device delivering focused mechanical soft-tissue stimulation — no prescription required. Employee self-administered.

Plug-and-Play Deployment

Fits break rooms, health stations, or recovery areas. Zero infrastructure changes.

3–6 Minutes, Every Shift

Pre-shift, mid-shift, or post-shift — inside the existing break schedule, with zero production disruption.

OSHA First Aid Aligned: 29 C.F.R. § 1904.7(b)(5)(ii)(M) classifies "massages" as first aid — not recordable medical treatment. RCT Industrial's mechanical action is functionally equivalent — deployed under a written Industrial First-Aid Protocol with mandatory red-flag screening.

Recordability is always determined by OSHA Part 1904 based on the facts of each case.

One Program. Two Teams Aligned Around the Same Outcome.

Safety leaders need a documented, defensible first-aid program that protects workers without adding administrative burden. Finance leaders need measurable cost control they can put in a budget model. RCT Industrial is built to satisfy both from day one.

Built For Two Audiences

FOR SAFETY & OPERATIONS

Documented First-Aid Protocol
Employee self-administered written protocol with mandatory red-flag screening keeps your program defensible.

Faster Return-to-Work
On-site recovery shortens lost-time duration and restricted-duty extension.

Stronger Reporting Culture
Workers who see proactive support report strain early, before it escalates.

FOR FINANCE & EXECUTIVE LEADERSHIP

Modeled Six-Figure Savings
Severity compression modeled against national claim-cost benchmarks.

Lower WC Costs Over Time
Improved claims trend strengthens your position at every renewal.

Zero Capital Infrastructure
Plug-and-play deployment — no facility modification, fast payback.

THE FINANCIAL CASE, MODELED

Modeled against a 40-injury facility at the National Safety Council's $48,000 per-claim benchmark — a $1.92M annual baseline exposure:

Conservative 10%	Moderate 20%	Strong 30%
$192,000	**$384,000**	**$576,000**
Often offsets the full program cost on its own.	Visible in EBITDA and experience-mod trend reporting.	Multi-site operators can scale this to $2M+ across a portfolio.

The Bottom Line

If your facility can prevent even 1 recordable MSD injury per month by treating minor complaints as first aid events on-site, the savings in workers' comp claims, lost workdays, legal exposure, and insurance premiums can reach hundreds of thousands of dollars annually — far exceeding the cost of ReGen RCT Industrial implementation.

NEXT STEPS

Ready to see what ReGen RCT can save your facility?

1. Email us at industrial@regenmedicalnetwork.com and a team member will reply shortly
2. Visit industrial.regenmedical.com for more details on the ReGen RCT Workforce Recovery Program
3. Call us at 775-255-9090 to request a supervised on-site demonstration at your facility
