RCT Industrial - An OSHA First-Aid Solution Built for the Renewal Conversation

A protocol-governed, on-site recovery device engineered to move the four numbers that drive every industrial account: claim severity, claim frequency, total cost of risk, and DART.

Severity | **Frequency** | **TCOR** | **DART**

THE OPPORTUNITY FOR YOUR BOOK

Musculoskeletal strain is the single largest, most predictable lever on industrial loss and it already sits inside OSHA's first-aid category.

Every industrial account you write is already carrying this exposure. RCT Industrial gives you a documented, protocol-governed program to bring to that account — one built specifically to move claim severity, claim frequency, total cost of risk, and DART, not just to check a wellness box.

$181.4B
Total annual cost of work injuries to the U.S. economy (NSC, 2024)

$13.7B
Annual cost of overexertion injuries alone (Liberty Mutual)

$48,000
Average cost per medically consulted injury (NSC, 2024)

937,620
MSD DART cases (BLS/NSC, 2023–24)

WHAT IS ReGen RCT INDUSTRIAL?

Class I FDA-Cleared
Registered medical device delivering focused mechanical soft-tissue stimulation — no prescription required. Employee self-administered.

Plug-and-Play Deployment
Fits break rooms, health stations, or recovery areas.
Zero infrastructure changes.

3–6 Minutes, Every Shift
Pre-shift, mid-shift, or post-shift — inside the existing break schedule, with zero production disruption.

OSHA FIRST-AID ALIGNED
29 C.F.R. § 1904.7(b)(5)(ii)(M) classifies "massages" as first aid — not recordable medical treatment.
RCT Industrial's mechanical action is functionally equivalent — deployed under a written Industrial First-Aid Protocol with mandatory red-flag screening.

Recordability is always determined by OSHA Part 1904 based on the facts of each case.

Why RCT Industrial Belongs in Your Renewal Package

You Don't Need to Sell a Device. You Need to Move Four Numbers.

Brokers who bring a documented severity-and-frequency program to renewal change the terms of the relationship. Carriers who can price around a client that's moving these numbers write better business.

THREE TOUCHPOINTS, EVERY SHIFT

1 Pre-Shift Warmup

Reduces baseline stiffness before the first lift.

2 During-Break Recovery

3–6 minutes inside the existing break window.

3 Post-Shift Recovery

Breaks the strain-accumulation pattern shift over shift.

WHAT THIS MEANS FOR YOUR BOOK

A Number, Not Just a Policy

Arrive at renewal with a program that addresses severity, frequency, TCOR, and DART directly.

Differentiation Pricing Can't Replicate

A documented, OSHA-aligned first-aid program is a value relationship — not a rate quote.

Stronger Retention Economics

Clients who see comp cost and DART trends improve stop shopping the account.

Underwriter-Visible Loss Control

Written protocol, certified training, and quarterly reporting support better renewal terms.

WHERE THIS BELONGS IN YOUR BOOK

Warehousing | Manufacturing | Construction | Logistics | Field Services | Food Processing

READY TO BRING THIS TO YOUR BOOK?

We'll review your book, identify your top candidates, and walk through the broker/carrier partnership model — co-branded materials, implementation support, and ongoing account management.
