

CCM · CELL CONDITIONED MEDIA

The future of skincare isn't an ingredient. It's a signal.

During cultivation, human stem cells release growth factors, cytokines, proteins and other signaling molecules into the surrounding culture medium. When included in our moisturizing cream, these nutrients can be utilized by your skin to rejuvenate.

Our product is built on the harvest, not the cells, the signal they send, that signal returned to your skin in a twice daily cream.

WELCOME TO THE FUTURE

HOW IT'S MADE

What's in the jar, and how it got there.

What type of human cells produce the CCM?

Cell conditioned media (CCM) is produced using human mesenchymal stromal cells derived from umbilical tissue donated by screened U.S. donors. The finished cream contains the conditioned media the cells produce, not the cells themselves.

How are the cells cultivated?

The cells are expanded under controlled laboratory conditions until the required quantity is reached. During cultivation they release growth factors, cytokines and other signaling molecules into the surrounding culture medium. That conditioned medium is collected and processed for use in the cream.

Is it manufactured under sterile conditions?

The CCM is not terminally sterilized. It is produced and processed aseptically under controlled conditions and subsequently tested for sterility.

What concentration of CCM does it contain?

The finished formulation contains 10% CCM, carried in a base of cold-pressed plant oils and botanical extracts, mostly from organic sources.

What are mesenchymal stromal cells?

Cells associated with connective tissue. Under appropriate laboratory conditions, and in response to specific signaling molecules, they can self-renew and differentiate into several specialized cell types.

What signaling molecules are present?

A complex mixture of cell-secreted signaling molecules, including anti-inflammatory cytokines and growth factors. Certain components and processes are proprietary and are the subject of five pending patent applications.

Is the CCM independently tested?

Yes. Every batch is tested by an independent third-party laboratory, including testing for microbiological and viral contamination.

Has the finished cream been evaluated?

Yes. The finished cream has been evaluated in research reported in four independent, peer-reviewed publications. Copies are available to spa and retail partners on request.

Give your skin the signal it needs, and it does what it already knows how to do.

10% CCM

CONCENTRATION

1 oz / 30 mL

ONE JAR

Made in USA

ASEPTIC PROCESS

12 months

SHELF LIFE

WHAT'S INSIDE

A signal is only as good as what carries it.

Our base has one job: deliver the signal, and treat your skin well while it does. Nothing that doesn't earn its place.

CCM · aloe leaf juice* · coconut oil* · DMAE bitartrate · polysorbate 80 · emulsifying wax · stearic acid · glycerin · jojoba seed oil* · meadowfoam seed oil* · avocado fruit oil* · witch hazel water · vitamin E · sunflower seed oil* · MSM · white willow bark extract* · neem seed oil* · rosemary leaf extract* · alcohol · dimethicone · xanthan gum · tetrasodium glutamate diacetate · lemon extract*

* Derived from organic sources.

STORAGE & USE

Twice a day. A minute with yourself.

Use twice daily as part of your skincare routine. Adjust the amount to your skin and the season; a little more may be welcome in dry climates or colder months. Consistent use helps support skin hydration and texture.

Shelf life is one year stored at room temperature, at or below 78°F (26°C). Keep the container tightly closed and away from excessive heat and direct sunlight.

DIRECTIONS

Three steps.

- 1 Apply the cream evenly to the forehead, cheeks, nose and chin.
- 2 Gently massage into the skin using upward and outward motions.
- 3 Allow it to absorb fully before applying any additional skincare products.
