Modern Income Models: E-Commerce vs. Financial Advisory

Overview

Diversifying household income requires choosing the model that best fits your time availability and financial goals. We specialize in structuring two distinct models designed for long-term sustainability:

1. E-Commerce Storefront Track (Hands-Off / Operational)

- **How it works:** Setup and management of an automated Amazon/e-commerce store with pre-validated product demand.
- **Key benefit:** Built for individuals seeking supplemental income streams without taking on active sales or client-facing roles.
- **Your role:** Store owner and capital overseer.

2. Financial Agency & Advisory Track (Active / Scalable)

- **How it works:** Launching an independent agency model through an established brokerage network (*Infinity Broker* infrastructure).
- **Key benefit:** Build a recurring income portfolio by helping families optimize asset protection and wealth strategy.
- **Your role:** Licensed agency owner or independent representative.

Next Step

Both models operate differently regarding start-up involvement, time commitment, and yield potential.

A 1**0-minute visual screen share** is used to lay out the numbers for both tracks so you can evaluate if either aligns with your targets.
