FGA

Your reel design system, then raw video to finished reel

FGA IG Reel Designer + Editor, a free plugin for Claude. About 10 minutes the first time, then just send a video.

0 **Add the plugin first.** Follow `How to add it.pdf`, then open the **Code** tab in the Claude desktop app and type `/reel-studio`. It runs on your Mac. Your videos never get uploaded.

DESIGN SYSTEM once, your look for every reel

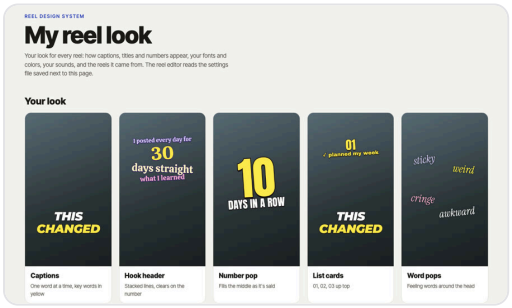

1 It asks first: **paste links to 2 or 3 Instagram reels** whose style you love, and a screenshot of you from a video you filmed.

"Here are three reels I love:" then paste the links.

2 It studies each reel frame by frame and names what to borrow. Then you **pick** a caption style, a title style, a number pop and the sounds you like.

3 You get **your design system**: a page with your look, fonts, colors and sounds. Every reel after this uses it.

IG REEL EDITOR every reel, from one raw video

4 Send your **raw talking-to-camera video**, straight off your phone. Nothing else needed.

5 It edits in eight steps and shows you a **preview after each one**. Say yes, or ask for a change.

- **Transcribe**
- **Cut the pauses**
- **Zooms**
- **Captions**
- **Text pops**
- **Sound**
- **Safe zone check**
- **Cover**

Every word captioned, the big number popping on the word you say it, and nothing hidden behind Instagram's buttons.

6 You get a **Ready to post** folder: the finished reel, the cover, and the caption file. Add music in the Instagram app if you want it.

7 Next reel, just send the video:

"/reel-studio, use my saved look. Here's my video."

What you need

A Mac, the Claude desktop app, and Google Chrome. On the first run it checks your Mac and tells you what to add, one line each.

One piece at a time

Every step is its own skill. Type `/reel-safe-zone` to check a reel you edited yourself, or `/reel-cover` for just a cover.

Make it yours

When you correct something, it asks to save the fix, so it gets closer to your style every reel.
