FGA

How to add the plugin to Claude Code on your Mac

About two minutes, once. Then it's there every time you open the Code tab.

0 **Download the plugin** from **farrisgreen.ai/skills/reel-editor**, then double-click the zip. Move the `FGA IG Reel Designer + Editor` folder into your **Documents** folder. Don't rename it.

1 Open the **Claude desktop app** and click the **Code** tab. Start a new session in any folder. The plugin needs the Code tab because it runs small programs on your Mac to edit the video.

2 Paste this message and send it. Claude adds the plugin for you and asks before it runs anything:

> "Add the Claude Code plugin in my Documents folder called FGA IG Reel Designer + Editor. Run claude plugin marketplace add on that folder, then install fga-ig-reel@farris-green."

Prefer Terminal? These are the two lines it runs:

```
claude plugin marketplace add ~/Documents/"FGA IG Reel Designer + Editor"
claude plugin install fga-ig-reel@farris-green
```

3 Start a **new session** in the Code tab, so it picks up the plugin.

4 Try it. It starts by asking for 2 or 3 reels you love:

> /reel-studio

The first time, it checks your Mac for three free tools (ffmpeg for video, Chrome for fonts, and a speech-to-text tool) and gives you one line to install each. Nothing installs without your OK.

What's inside: ten skills, use them together or one at a time

`/reel-studio`
The whole thing, start to finish. Start here.

`/reel-transcribe`
Every word, with exact timings

`/reel-framing`
Frame your face, add zooms and a light grade

`/reel-text-pops`
Hook, big numbers, list cards, call to action

`/reel-safe-zone`
Check nothing hides behind Instagram's buttons

`/reel-design-system`
Build your look from 2 or 3 reels you love

`/reel-tighten`
Cut the pauses, ums and double takes

`/reel-captions`
Every word on screen in your style

`/reel-sound`
Pops and sparkle, set to Instagram loudness

`/reel-cover`
Your best frame with the hook on it

Can't see it?

Make sure you're in the Code tab, not a normal chat, and that you started a new session after step 2.

Is it safe?

It runs only on your Mac. Your videos and photos are never uploaded. It asks before installing anything.

Need a Mac?

Yes. It uses the Mac's built-in face detection and text reading to frame you and check your captions.
