TESTS AND RESULTS

Test Conducted:

CAN/ULC-S102:2018+R1:2019 Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies

Sample Preparation:

Prior to testing, the specimen was conditioned to constant weight at a temperature of $(23\pm3)^{\circ}\text{C}$ and a relative humidity of $(50\pm5)\%$.

The test specimen consisted of a total of 9 sections of material. The sections were butted together during testing to form the requisite specimen length. The specimen was self-supporting on the ledges of the test chamber

Test Results:

Sample No.	Calculated Values	
	FSV (Flame spread Value)	SDV (Smoke developed Value)
1	16.0	34
2	15.5	35
3	13.9	31

Classification:

FSR(Flame Spread Rating):15

SDC (Smoke Developed Classification):35

Remark:

FSR - Calculated the numerical average of the individual Flame Spread Values (FSV), then round the average to the nearest of 5 points. The rounded average is the Flame Spread Rating (FSR)

SDC - Calculated the numerical average of the individual Smoke Developed Values (SDV), then round the average to the nearest of 5 points. The rounded average is the Smoke Developed Classification (SDC)

Observations of Burning Characteristics:

Specimen No.	Time to ignition(s)	Comments and Observation
1	59	Charring
2	64	Charring
3	66	Charring
