TEST.COM

1. Complimentary Landing Page (Tailored to Your Niche)

We create a professionally designed landing page customized specifically for your industry and services. This page is optimized to capture leads, clearly present your offer, and encourage visitors to take action through contact forms, calls, or appointment bookings.

2. Google Business Profile (GBP) Setup & Optimization

We set up or optimize your Google Business Profile to improve your local visibility on Google Search and Google Maps. This includes optimizing business information, service categories, photos, descriptions, and keywords to help your business appear when potential customers search for services in your area.

3. SMS & Email Automation (Tracking Phone Number & Lead Intake Forms)

We implement automated SMS and email follow-up systems connected to a dedicated tracking phone number and lead capture forms. When a potential customer contacts your business or fills out a form, the system automatically responds, nurtures the lead, and ensures no opportunity is missed.

4. Reputation Management with Smart Feedback System (1-5 Star)

We implement an automated feedback and review system that helps manage your online reputation.

Customers are asked to rate their experience from 1 to 5 stars.

- **5-Star Feedback:** Customers are directed to leave a public Google review.
- **1-4 Star Feedback:** Customers are directed to provide private feedback internally so issues can be addressed before becoming public reviews.

5. CRM Contact Management System

You receive access to a centralized CRM system where all leads, contacts, conversations, and customer interactions are stored. This allows you to track prospects, manage follow-ups, organize customer data, and maintain better relationships with your clients.
